Exterior products

SFIBRAL panels for a functional and efficient rear ventilated facade excel with exceptional resistance, ensuring durability and aesthetic appeal in even harsh conditions.

SFIBRAL Nature

SFIBRAL Nature captures the essence of natural beauty with its unique fiber cement cladding, designed to elevate modern architectural projects. Crafted with precision and innovation, this through-colored cladding brings authenticity and warmth to any design.

Through-colored fiber cement cladding with fine sanding lines and subtle tonal variations. Over time, the surface matures, developing a distinctive patina that enhances its natural appeal.

SFIBRAL Spectrum

Through-colored or grey fiber cement panels with smooth opaque acrylic coating.

Available in many RAL or NCS colors, Spectrum gives the freedom to design facades with uniform color.
